What AI does best

AI changes the logic of work because it helps in four areas: thinking, organizing, producing and reviewing.

TYPE OF TASK	HOW AI HELPS
Text tasks	Creates drafts, improves clarity, changes tone and summarizes content.
Analysis tasks	Organizes information, compares options and finds patterns.
Planning tasks	Creates steps, timelines, priorities and checklists.
Research tasks	Finds sources, synthesizes information and builds decision maps.

The 4D System for AI Productivity

Dump, Decide, Develop and Delegate — turns loose thoughts into clear actions.

1. Dump

Get everything out of your head: tasks, pending items, ideas and deadlines.

2. Decide

Ask AI to organize by priority, impact and urgency.

3. Develop

Use AI to create drafts, plans and analyses.

4. Delegate

Turn repetitive tasks into templates and automations.

The productivity prompt

Most people ask for loose answers. The productive user asks for usable results.

PROMPT TEMPLATE

"You are my productivity assistant. Context: [explain the situation]. Goal: [state the desired result]. Constraints: [time, tone, format, audience, limits]. Deliver as: [table, checklist, email, plan, script]."

IN THE FULL GUIDE

The complete guide has the 6-block productivity matrix, 9 tools compared, 8 ready-made workflows, 30+ prompts, and a 14-day implementation plan.

SAMPLE

A ready-made workflow to try today

Smart weekly planning

Goal: organize tasks, goals and priorities for the week without relying only on memory.

Tools: ChatGPT, Claude, Gemini or Notion AI.

READY-TO-USE PROMPT

"Act as my productivity planner. Organize my week based on these tasks: [paste]. Sort by priority, deadline, impact and required energy. Then create a suggested Monday-to-Friday schedule, with a maximum of 3 priorities per day."

Want the full system?

The complete guide has 8 ready-made workflows, 30+ prompts, the knowledge-base method, and a 14-day implementation plan.
